PROFESSIONAL SUMMARY

Data Science and AI undergraduate at NTU. Built ten automation pipelines and an AI agent that a marketing team of 10 now uses every day at an e-commerce business. Also shipped a desktop Git client, currently being tested by 10 users. Works in Python, SQL and machine learning, and is used to getting tools adopted by people who are not technical and do not speak English.

SKILLS

Languages

Python, TypeScript, SQL

ML and Data

PyTorch, Pandas, LightGBM, Databricks

AI and Automation

n8n, Claude Code, MCP, Amazon SP-API and Ads API

Infrastructure

Docker, Linux VPS, GitHub Actions, Supabase, Next.js

EXPERIENCE

AI and Automation Specialist

May 2026 - Aug 2026

LaLaGreen, Internship · Singapore (Hybrid)

- Built ten n8n pipelines on the Amazon SP-API and Ads API. The marketing team of 10 uses them daily.
- Automated PPC budget top ups. The pipeline checks ACoS per campaign and adds spend only when a campaign goes over its limit, so nobody tops up by hand.
- Automated price changes, so the team can reprice products without setting off Amazon's alerts.
- Built Hermes, an AI agent that answers questions on company data without opening Seller Central. It also raises budgets and uploads bulk campaigns.
- Ran Hermes and n8n on a Docker VPS for the whole team, and pitched the tools to 10 to 15 people across departments to get them used.

Tuition Teacher

Jan 2025 - Jul 2025

Mindflex Tuition Academy · Lessons planned around each student's weakest topics

Platoon Sergeant

Jan 2023 - Nov 2024

Singapore Armed Forces

- Led a platoon of 20 operating drones and surveillance systems.

PROJECTS

Git Dummy

2026

Desktop Git client · Python, PyQt5, GitPython, GitHub REST API, PyInstaller, GitHub Actions · github.com/BruhClient/Git-Dummy

- Built a Git client for people who do not know Git. It draws the repo as a map and replaces commands with plain English buttons.
- Being tested by 10 coursemates, 5 of them non-technical. They learn on a sandbox repo instead of their own files.
- Wrote the commit graph layout and the PyQt5 interface, with a pannable canvas, diff viewer and pull request inbox. Git work runs off the main thread.
- Shipped 12 Windows releases with PyInstaller, NSIS and GitHub Actions. Every destructive action says what it will delete first.

Military Stores Telegram Bot

Jun 2024

Python, Google Sheets API, Telegram Bot API, DigitalOcean · github.com/BruhClient/ISR-Stores-Bot

- Replaced paper stores logging for a platoon of 20. Drone and camera equipment is checked in and out through Telegram and the Google Sheet updates itself, so command can see stores live.
- Added role based access so only authorised people could run sensitive commands. Hosted on DigitalOcean so it stayed up.
- Ran for 6 months. New bots in the unit still start from this code.

EDUCATION

Bachelor's in Data Science and AI

Nanyang Technological University · Expected Apr 2029

GPA: 4.34

Cambridge A Levels

Jurong Pioneer Junior College · Nov 2022

Cambridge O Levels

Hua Yi Secondary School · Nov 2019

CERTIFICATIONS

Databricks AI/BI for Data Analyst

Databricks · Jan 2026

Machine Learning Specialization

DeepLearning.AI · May 2025

Python for Data Science and AI

IBM · May 2025

Microsoft Excel Specialization

Microsoft · May 2025

AWARDS

BrainHack CODE_EXP 2026, Finalist · NUS Maritime Hackathon 2026, Certificate of Merit, top 28 of 160 teams · EAGLES Award 2020
